## **EXPLOR TO START 3,000 METER DIAMOND DRILL PROGRAM** **ON THE** **KIDD TOWNSHIP PROPERTY**

**Rouyn-Noranda, Canada, January 18, 2013 - Explor Resources Inc.** is pleased to announce the commencement of a 3,000 meter diamond drill program on the Kidd Township Property. Explor will focused on a 500 hectare portion of ground located approximately 2.0 kilometers west of the Kidd Creek open pit. The property is located in the Kidd Township in the Porcupine Mining division, district of Cochrane, Province of Ontario.

The Kidd Township Property is located in the south central part of Kidd Township to the west, south, south-west and north of the Kidd Creek mine site. The property is approximately 20 km north of the city of Timmins, Ontario. Excellent access is provided by Hwy 655. Explor's land position in the area is 2,466 hectares. The most obvious topographical feature in the area is the Kidd Creek open pit approximately 1.6 km to the east of the property. The property is located in a greenstone belt composed mainly of sequences of meta-volcanic rocks cut by faults and deformation zones that lie in a NW-SE direction.

Recent analysis of the previous completed drill program, the MEGATEM survey, the VTEM survey and previous historical drill results has confirmed that a major fault structure crosses the northeastern corner of claim block 4211459. This fault structure and Explor's claims are shown on the attached plan. The claims are outlined in white and black. Both the Kidd Creek and the Chance deposits are located within this fault structure that crossed the Northern part of the claim block. In the previous drill program Explor found in the core sulfide rich flow breccias and coarse pyroclastics, which are indicative of a volcanic mound and nearby venting, favourable area for the deposition of massive sulfides.

Geological modelling for the deposition of marine volcanogenic massive sulphides proposes that hydrothermal venting usually occurs along a deeply rooted fault "growth fault". Hydrothermal venting and sulphide deposition can occur in multiple locations over many kilometres along such faults, resulting in a "string" of massive sulphide deposits (i.e. Noranda and Mattagami mining camps). Assuming that the Kidd Creek and Chance deposits lie along such a growth fault, the projection of this fault would crosses the northern portion of claim 4211459 in the area of VTEM anomalies C1 and C2, as well as the isolated MEGATEM anomaly which lies nestled in between.

Chris Dupont, President and Chief Executive Officer of Explor Resources Inc. commented: *"We are extremely excited that we are about to test this major fault structure with our proposed program on our 100% owned Kidd Township Property. VMS deposits tend to cluster in districts (or camps) and locally within districts. The average massive sulphide camp in Canada has about 9 deposits, but ranges from 4 (Manitowage) to 21 (Noranda), and 27 (Bathurst), however an individual deposit may consist of a number of closely associated lenses ranging from several thousand to several million tons. The largest deposits in this group may be in excess of 100 million tons (example: Kidd Creek, Brunswick Bathurst No.12)"*

The proposed 3,000 meter diamond drill *program will* test an area 800 meters in length and 300 meters in width that has not yet been drill tested. The area to be tested is approximately 1.0 km to the west of the Chance (Zn-Pb-Ag) deposit as shown on the attached claim map. The area to be drilled appears to be located on the same synvolcanic collapsed structure as the Kidd Mine and the Chance Deposit. The EM targets occur along magnetic boundaries suggestive of a rhyolite/basalt contact.

The Kidd Creek Mine located to the east of the property is known for its Cu-Zn-Pb-Ag production. The Kidd Creek Mine has produced over 130,000,000 tonnes of base metal ore since it started production in 1966. This acquisition is being made because of Explor's belief in the cluster effect of VMS deposits. The presence of mafic and felsic rocks with anomalous zinc and copper make this an exploration property of merit.

**Explor invites investors to visit our booth #1212 at the Vancouver Resource Investment Conference held from January 20 to January 21, 2013 at the Vancouver Convention Centre West.**

### **About Explor Resources Inc.**

Explor Resources Inc. is a Canadian-based natural resources company with mineral holdings in Ontario, Quebec, Saskatchewan and New Brunswick. Explor is currently focused on exploration in the Abitibi Greenstone Belt. The belt is found in both provinces of Ontario and Quebec with approximately 33% in Ontario and 67% in Quebec. The Belt has produced in excess of 180,000,000 ounces of gold and 450,000,000 tonnes of cu-zn ore over the last 100 years. The Company was continued under the laws of Alberta in 1986 and has had its main office in Quebec since 2006.

Explor Resources Flagship project is the Timmins Porcupine West (TPW) Project located in the Porcupine mining camp, in the Province of Ontario. The TPW mineral resource includes: **indicated: 212,800 ounces of gold** (1,371,000 tonnes at 4.83 g/t Au) and **inferred: 814,800 ounces of gold** (7,122,000 tonnes at 3.56 g/t Au (Press Release dated June 06, 2012).
